

SUMMARY

DevOps Engineer with 3.8 years of hands-on experience supporting, automating, and optimizing mission-critical deployments in AWS, leveraging configuration management, CI/CD, and DevOps processes with a specialisation to serve 4-5 Major Fintech Companies.

I'm generally responsible for Web & Digital platform architecture - preparing the Cloud migrations, starting the adoption of DevOps principles, scaling the performance, modernizing the stack to embrace API, modern architectures, containers, and microservices.

In my career, I've delivered several strategic and successful projects for app modernization, cloud migration, DevOps, Agile Release Management, and business user experience. To the challenges of budget and incomplete requirements, I try my best to bring the focus on both business and end-user, delivering the most significant value possible with the available resources

KEY SKILLS

- **Containerization** • **Version Control** • **Database Management Infra Side**
- **Load balancing** • **Security Hub**
- **Cloud Technology Management** • **Virtualisation**
- **AWS Cloud Computing(30+ AWS Services)**
- **Cloud Security (Specialisation)**
- **Elastic Search** • **JIRA Automation**
- **Shell Scripting** • **Networking & Configuration** • **Deployment & Provisioning** • **2 Audit Experiences**
- **Lambda** • **Data Pipeline** • **CI/CD**

TECHNICAL SKILLS

- **OS:** Linux based Systems
- **Languages:** Python
- **Version Control Systems:** Git
- **Automation/Build Tools:** Jenkins, Docker
- **AWS Services:** AWS CDK, Cloudformation, Lambda, Sagemaker, EC2, VPC, EC2 Imagebuilder,
- **Virtualisation:** VM Ware ESX/ESXi, Docker, Amazon AWS/EC2
- **Platforms:** Linux, UNIX, Windows
